

Cable Management Kit

Corner Bend Managers & Hole Plugs with Caps

Application / Product Description

HellermannTyton designed these accessories to safely guide the faint fibre and maintain minimum bend radius inside the customer property.

Corner bend managers provide a safe routing of the fibre (600 or 900µm) around door frames, architraves, skirting boards.

The external ones fit on the outside of bends i.e. top of door frames, whilst the internal ones go on the smaller corners on the inside of bends i.e. between bottom of door frame and skirting boards.

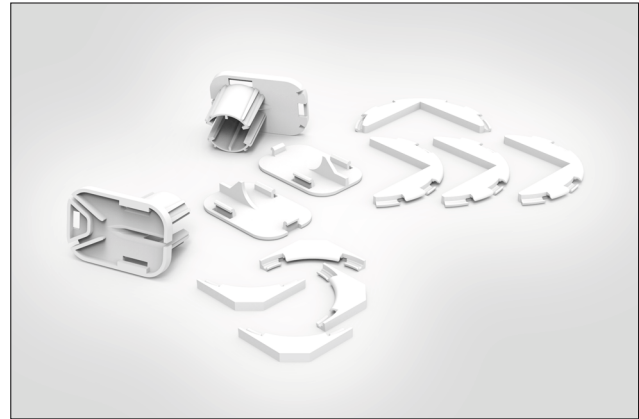

Hole plugs with caps allow to protect the fibre and cover drill holes when going through walls. The fibre is inserted into a slot and guided through the hole plug. Once finished the cap clips on top of the plug to secure the fibre. A drill hole diameter of 12mm is recommended.

Manufactured in PC/ABS V0 rated, these accessories are suitable for indoor use and are supplied with a self-adhesive backing strip.

Other accessories such as cable rod set, rod end caps, nano clips, p-clips, glue and dispenser are available to safely route the fibre.

Features and Benefits:

- Discreet and efficient accessories
- Self-adhesive backing strip for easy installation
- Suitable for 600µm or 900µm
- V0 rated
